

NEWSLETTER NOVEMBER 2016

COMING SOON FROM MANDARIN

We are working on several exciting development initiatives that we expect to roll out in early 2017.

We are close to wrapping up alpha development on a web-based report module that will be rolled into Mandarin M5 at no additional cost. I am encouraged by the progress that has been made to this point, and we expect to spend the next few months doing extensive testing for release in early 2017.

Additionally, we are currently piloting a totally revamped interlibrary loan (ILL) workflow that was developed in collaboration with OCM BOCES in Central New York. While we are still working out a few kinks, I am excited about the features that we've added to facilitate regional resource sharing.

Both of these initiatives reflect our effort to develop software built with librarians for librarians, and we appreciate all of the input that continues to flood in. If you have any questions about these or any other development initiatives, please don't hesitate to contact me (carlosc@mlasolutions.com) or VP of Sales and Marketing Art Graham (artg@mlasolutions.com).

Looking forward,
Carlos

DO YOU KNOW ABOUT AUTO PATRON IMPORT?

This utility helps your library keep patron information up to date. Automated Patron Import will import patron data files that are in tab or comma delimited format without requiring the user to do the import steps manually. Patron information from an administrative office outside the library, such as a registrar's or superintendent's office, can be dropped into a storage space. The program picks up this information at a regular interval set by the library. The data is checked for format and completeness before only new and changed records are automatically imported and mapped to the appropriate fields and subfields.

MANDARIN EXTENDS A WARM WELCOME TO OUR NEWEST CUSTOMERS

Sonoita Elementary School
