Working with you: You Asked. We Delivered.

The newest version of Mandarin Oasis / Web OPAC includes new features and updates based on customer feedback. Our goal, as always, is to continue to make the program easier to use, more feature-rich, and as efficient as possible in handling the procedures librarians need every day, while also providing a user-friendly interface for library patrons.

Below are just a few of the highlights included in this 2.8.5 update, and as always, **click here** to view a complete list of improvements and bug fixes.

- Setup Page: logged-in users with Setup privileges can now access the Setup page by clicking the **Enter Setup** button on the main Oasis/WebOPAC page (access VIDEO TUTORIALS for the Setup Page **here**).

- Visual Search: logged-in users with configuration privileges can now access Visual Search directly from the Visual Search page; simply clicking **Configure Visual Search** will open the Visual Search Setup page, which requires a separate login and password.

- Bookbag Bibliography: any one of the multiple Bookbags a user has created can now be saved as a Bibliography with a URL link from a Visual Search component, from Mandarin CMS, or from any other website. Keep an eye out for tips on how to use this great new feature.

- Customized Templates: the same customized templates that can be created in Cataloging are now also available in Circulation to add patron, bibliographic and holding records.

Thanks for all of your great feedback as we work with you to continue improving our products. And please keep it coming.

Stay tuned for future webinars that will include 2.8.5 features, and visit us at www.mlasolutions.com.
