New Mandarin M5 cataloging feature...

Log File import Management feature:

Mandarin M5 now keeps a summary log when you either import or purge your records. The log file can be reviewed at any time.

In M5 cataloging, the new "Log Files" option will allow you the librarian to see when an import occurred. It will also provide an import summary and allow you to see what items were imported. It will also provide a summary on when a purge occurred and a report on what records were purged.
